Scandit and Apple - Scanning on iPad and iPhone

Transform your employee experience with a single device strategy.

Explore our other retail offerings to discover how a single device with Apple can provide flexibility to your hardware estate.
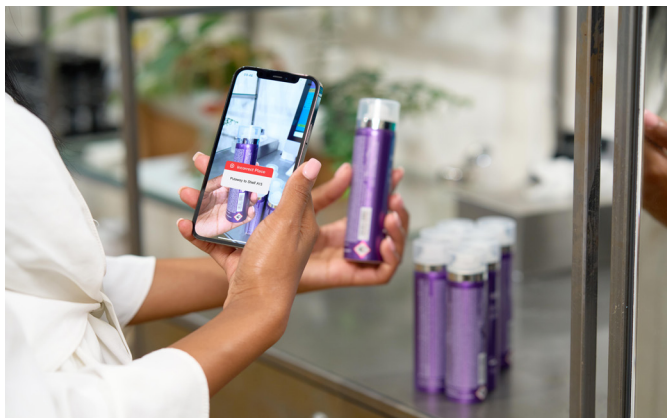

iPad and iPhone are renowned for their ease of use with market leading design and intuitive software in iPadOS and iOS. Your retail teams are likely already familiar with iOS devices and working with mobile apps which will help streamline adoption into your operation.

Why would you want it?

Retailers may already use dedicated scanning devices to perform various operational tasks, but these devices are bulky, single function and unintuitive to use. But retailers can enable enterprise-grade scanning, drive efficiency and transform the employee experience by combining the powerful capabilities of iPad and iPhone with Scandit Smart Data Capture software.

Associates use iOS devices and Scandit-powered apps to scan barcodes, text and IDs to gain actionable insights and automate end-to-end retail processes, from stock takes to clienteling . Developer support is provided during implementation and a range of support and analytics options during live service.

Optimise Processes

- Increased scanning capabilities even within challenging light, at angles or range, even damaged labels, across multiple codes
- Captures an entire set of barcodes in a single sequence for ultimate efficiency
- Easy to use apps accessing your data sources

Define New Experiences

- AR overlays with real-time information on the device screen helps reduce human error and get new staff rapidly up-to-speed
- Innovate and reimagine retail processes with iOS devices and smart data capture, boost productivity, elevate customer and employee experiences
- Present AR safety information and handling instructions to help protect employees
- Scan IDs to verify age or speed up loyalty scheme onboarding

CDW PEOPLE WHO GET IT®

How CDW can help

In an initial workshop with one of our solutions architects we will explore your current processes and challenges. We will map your requirements to the right devices, software and services to help you deliver your business goals.

· Adoption
· Device management
· Asset tagging
· Break Fix and Support
· Lifecycle management

If your organisation doesn't currently have a custom iOS app we can help you find a suitable partner to work with to develop this to your requirements.

Key Stakeholders

· Successful service delivery necessitates the involvement of:
· CDW Solutions Architect to hold discovery call
· Client IT Director/Manager
· Client MDM administrator
· Client representatives from EUC/workspace team

Why Apple with CDW?

As an Apple Authorised Enterprise Reseller (AAER), CDW provides a unique customer experience with a large proportion of our customers already recognising the benefits of Apple's platform to help them do their best work.

We offer technical, commercial, and operational expertise on a truly global scale. Support from our dedicated Apple Practice spans all aspects of the wider CDW business to ensure that at every stage of the lifecycle, we are perfectly positioned to help organisations adopt Apple technology and meet their business outcomes.
